The CRT-pH Series pH neutralization systems are designed for pre or post adjustment of wastestream pH values that vary in the same direction from the required value or variable pH levels in any direction. The system is an integrated design that monitors and controls pH levels within a neutralization vessel via adjustable chemical metering pump.

The system is designed for uses such as meeting discharge (6-9) requirement, metals precipitation, pH neutralization etc. Applications are reviewed and system flexibility matched to achieve required solution.

The systems are configured to control pH by metering acid, base or both to meet project requirements. The standard system design shall incorporate treatment of a continuous stream. Where desired or required the system can be configured for use on a batch basis.

Customization & modifications to fit your project needs are offered. Flow rate range accommodated is 5-500 GPM.
